REQUEST FOR A CERTIFICATE OF CORRECTION UNDER 37 CFR § 1.322

Commissioner for Patents  
P.O. Box 1450  
Alexandria, VA 22313-1450

Certificate  
FEB 23 2005  
of Correction

Sir:

In accordance with the provisions of 37 CFR § 1.322 of the Rules of Practice, which implement 35 USC § 254, the Patent and Trademark Office is respectfully requested to issue a Certificate of Correction in the above-identified patent. It is certified that errors appear in the above-identified patent as shown in the attached Certificate of Correction. Applicant certifies that the errors are of a minor character and were not the fault of Applicant. Since the changes necessary to correct these errors in the patent would not constitute new matter, and would not require re-examination, Applicant prays a Certificate of Correction will issue. Since errors were not the fault of Applicant, it is believed that there will not be a fee for this Certificate of Correction.

## UNITED STATES PATENT AND TRADEMARK OFFICE CERTIFICATE OF CORRECTION

PATENT NO.: 6,819,181 B2

DATE: 11/16/2004

INVENTOR(S): Stengel et al.

It is certified that error appears in the above-identified patent and that said Letters Patent are hereby corrected as shown below:

1. A method for signal isolation in electronic circuits, further comprising:

acquiring a signal of interest (SOI) at a local node;

coupling the SOI to a plurality of transmission paths, wherein each transmission path of

the plurality of transmission paths has a phase and a delay distinct from others of the plurality of transmission paths;

setting the delay and phase of each transmission path of the plurality of transmission

paths; and

combining the plurality of transmission paths at a remote node, wherein a signal at the remote node is created by summing a plurality of signals received on the plurality of transmission paths, said summation occurring in an in-phase manner in accordance with the selection of the delay and phase of each transmission path of the plurality of transmission paths, wherein the phase and delay of each transmission path are chosen to optimize an out-of-phase addition of a plurality of induced noise contributions that are essentially in-phase on the corresponding plurality of transmission paths.

12. A structure for signal isolation in electronic circuits, comprising:

a first node of a plurality of nodes of an input stage, said first node operable to receive a signal of interest (SOI);

the first node of the input stage coupled to a plurality of nodes of the plurality of nodes through a plurality of corresponding coupled elements, thereby creating a plurality of corresponding phased signals corresponding to the SOI;

each node of the plurality of nodes coupled to a plurality of transistive elements, said plurality of transistive elements operable to create a plurality of output signals at an output stage, said plurality of output signals proportional to the plurality of corresponding phased signals;

a plurality of remote nodes at the output stage coupled to the plurality of transistive

which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.14. This collection is estimated to take 1.0 hour to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, VA 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. **SEND TO: Attention Certificate of Corrections Branch, Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450.**
